

Computerized System Audits in a GCP Pharmaceutical Laboratory Environment

Mar 10, 2014 1:03 pm PDT

The key point to remember is that clinical laboratories process and manage patient data, and this data is used to make critical medical decisions. If the data a laboratory produces is incorrect, decisions taken may be incorrect, and this could mean: Patients may be harmed Submissions may be delayed or turned down Inaccurate information may be included on the product label.

White Paper: Validating a Computer System

White Paper: Infrastructure Qualification Proposed Standard
