

Designing Aseptic Process Simulations: The Time and Container Number Conundrum

By [Tim Sandle](#) May 30, 2016 7:00 am PDT

Certain pharmaceutical products must be sterile, including injections, ophthalmic preparations, irrigations solutions, and hemodialysis solutions. This is due to the route of administration and in relation to the intended patient population. The first paper looked at designing media fills for multiple product lines, by using a matrix; the second considered how interventions can be risk assessed.
