

GLP Equipment

May 13, 2013 9:49 am PDT

Basic good laboratory practice (GLP) quality system requirements include the use of equipment that is properly designed and maintained. Each GLP laboratory should have a comprehensive, up-to-date list of all equipment used in the facility including active and inactive equipment. Each GLP laboratory must establish a maintenance and calibration program for equipment. Back-up for vital equipment as well as backup for power failure should be available whenever possible. The calibration status of equipment should be readily visible on equipment. Calibration failures must be investigated. Individuals...
