ABSTRACT With cannabis reaching the world stage, everyone is eagerly watching its growth into the next big thing. Countries around the world allow access to cannabis products for medical use. While others, like Canada, and various states within the United States, have taken it a step further allowing the recreational use of cannabis. As the cannabis industry expands and consumers mature, the type and number of products being added into the marketplace diversifies. To meet demand, cannabis is grown and processed at an industrial scale. The once underground small scale grows have been replaced by...
