Introduction Our objective is to identify problems in a timely manner, to correct them and to prevent their re-occurrence. As a corollary to this, we want to foresee potential issues and ward them off before they become real. The ultimate goal is for the laboratory operation to become self-correcting. To be successful, management has put into place a corrective-and-preventative actions (CAPA) system. Any CAPA system must work effectively and its “effectiveness” must be measured. It must also work efficiently. The CAPA program itself should not become a problem. ...
