

Automated In-Line Dilution— A QbD Manufacturing Method

May 30, 2013 12:00 pm EDT

KEY POINTS DISCUSSED In-line dilution is a process in which two liquid streams are brought together in a controlled fashion to meet an overall target concentration. Complex solution processes may be accomplished by combining a series of in-line dilution equipment. Final desired solution can be manufactured using portable equipment “just in time” and delivered at the “point of use” Fast food restaurant beverage machines are examples of automated in-line dilution equipment Automated in-line dilution comprises: 1) Concentrated solution is combined with diluent solution; 2) The...
