Risk Revolution with Lori and Nuala, our QRM focused podcast series.

On this episode we go back to basics and get some facts straight. All processes and products come with some level of inherent risk. In life sciences, the goal is always to reduce risk as much as possible ensuring patient safety to the maximum extent. This systematic process for the assessment, controls, communication, and review of risks across the product life-cycle is the focus of this new series of podcasts called Risk Revolution. Take a listen as we take a look at risk management in the broader context and get some facts straight about the roles of quality professionals, supply chain, supply chain mapping and crisis planning, risk assessments and much more.
