The phytochemistry of the cannabis plant is of interest to researchers.

The article also refers to some recent advances with production processes, designed to bring production to scale, together with other aspects of commercialization like modes of drug delivery, such as inhaled, ingested, absorbed-transdermal and mucosal or injected. A follow-up article looks at a different type of risk, in the form of the microbiological quality aspects. Cannabis: Complexity And Quality For manufacturers of medical cannabis products, quality matters. Measuring quality is not straightforward, given the complexity of the plant where the cellular makeup varies considerably...
