Case Study #1—Equipment Cleaning Validation Including Visual Evaluation

May 13, 2013 11:45 am EDT

A validation case study involving equipment cleaning and inspection of cleaned equipment is discussed. The event comprised of cleaning multiple equipment per procedure. Manufacturing residue was observed in only one specific piece of equipment after cleaning. The following three issues were investigated: Equipment cleanliness evaluation. Multiple individuals evaluated the cleaned equipment as clean. Equipment cleaning. Residue was found on the equipment after cleaning. Cleaning validation. The equipment had been cleaned by a validated cleaning procedure. Investigation and root cause...
