

## Cleanroom Design, Construction, and Qualification

---

By **Ed White** May 15, 2013 7:58 am EDT

Construction and qualification of a new aseptic processing area is a complex project involving multiple disciplines. Good upfront strategic planning is critical for an effective qualification effort. All involved disciplines should be involved in planning for an aseptic facility. Construction and qualification of a new aseptic processing facility can be divided into several phases: planning, design, construction, commissioning, qualification, submission, and project closeout. Detailed design reviews should be performed on vendor design documents. These reviews should be repeated...
