

Combination Products—Engineering the Future of Healthcare

May 31, 2013 10:51 am EDT

Combination products are being developed in response to the increasing demands of patients requiring more advanced and more effective treatments. There are less formal regulations governing combination products because the field is relatively new. The US Food and Drug Administration's Office of Combination Products was created in 2002 to oversee the regulatory lifecycle of combination products. Major market growth is projected for combination products over the next decade both in the US and abroad. The drivers for combination products include patent life extension, more products and technologies...
