

Computer System Compliance and Quality Planning

May 14, 2013 1:53 pm EDT

The information contained in a quality plan (QP) is critical to the success of a project in meeting its quality goals. The extensive use of software in computer systems requires that the QP address software compliance in its many facets, sometimes with a separate software quality assurance plan (SQAP). One of the primary requirements for a QP or SQAP is a well prepared project management plan. It is the responsibility of the quality team to assure that the project work products produced by the project team are compliant with the requirements for the system. The quality assurance and compliance professionals...
