As an industry we are always striving to create the safest, most effective drugs and devices with the patient in mind. Providing a more personalized medicine and drug delivery system is beginning to be a bigger part of what we do each day. Through the use of new technologies and with risk-based systems in mind, we can more accurately tailor products to provide the best response, highest integrity and lowest risk, and AI is only one part of that effort. Join us for this novel discussion with Justin Bechtel as we imaging the future of AI and 3D printing technology applied to hyper-local personalized medicine.
