

## Evaluating Data for an Annual Product Review

**Sep 30, 2015 7:00 am EDT**

The Annual Product review (APR) is one of the most critical and useful tools that a company has in its quality arsenal. If done properly, it will be a decision making tool for validation, production, quality investigations, process optimization, training, and quality systems development. These are just a few of the uses, however, as this paper will endeavor to explain, the uses are unlimited. This paper will discuss the process from both a quality and regulatory perspective, and explain how it is linked into the quality and production departments of a firm.
