With digital technology playing an increasingly critical role in the life science industry today, companies are realizing the need to entirely digitize their validation lifecycle process to ensure that they remain compliant and competitive. The current pandemic has only accelerated this need for paperless systems, remote validation and eLogs, as they attempt to limit access and reduce exposure to the virus. Today we will hear how artificial intelligence and augmented reality are being used to complete hands-free validation processes.

Check out the technology in these short clips:

- AR/VR applications in industry - <https://vimeo.com/446663405>
- ValGenesis AR application (note – no sound in this video) - <https://vimeo.com/446673088/ab58e3f98e>
