

Information Security—A Critical Business Function

By **Robert H. Smith** May 31, 2013 10:43 am EDT

This article describes a hypothetical breach of computer security. It describes how easily a corporate computer system may be accessed, both by unauthorized internal personnel and by an outside "hacker." The results of such a breach may be disastrous. And it may be surprising how easily these breaches can be accomplished. Suggestions for preventing these types of problems are provided. Download "Information Security—A Critical Business Function"
