There are unique challenges inherent to emerging technologies in clinical trials development, scale-up, and manufacture. As we begin to harness the data delivered through AI, and further refine the processes around automation, IVT Network strives to bring to light some of the most innovative products and uses for the benefit of the entire life sciences industry. In this episode we hear from Dr. Peter Small, from Hyfe about an AI cough monitor that detects and records every cough and turns that into reliable clinical data.
