The data set is so large and complex making traditional processing techniques ineffective. There's difficulty analyzing, capturing, collecting, searching, sharing, storing, transferring, and visualizing the data. Protection of personal data. The volume of data has been steadily increasing making it difficult to collect and integrate all the information. In Figure 1, electronic records (e-records) stored in the Big Data Level are central repositories (databases) of data from one or more disparate sources. These sources are depicted in the figure as Operational Applications. Figure...
