As we begin to harness the data delivered through AI, and further refine the processes around automation, supply chain, new norms around surface contamination and sanitization, IVT Network strives to bring to light some of the most innovative products and uses for the benefit of the entire life sciences industry.

In drug and device production we are accustomed to concern about contaminants, and mitigation of impurities, pollutants, toxins. Heightened awareness around this topic is a direct result of the coronavirus pandemic, which has impacted the way we think and act about cleaning processes and will continue to do so for the long term. In this episode we talk about clean surface technologies, medical device applications and BIOFoam, a sustainable material changing the way life science cleans, created by Scott Smith, CEO of AquaFlex.
